

**ABSTRACT**

The device comprises a base (1) and an  
5 exchangeable case (7), between which are placed  
corresponding components such as a bottle (9) containing  
the fragrant liquid and the corresponding wick (8), as  
well as the heating elements (4) connected to  
corresponding metallic contacts (5) and mounted on a  
10 support (3), also including a platform or printed circuit  
(2) with electronic components that allow optimizing the  
diffusion of the fragrance, to prevent olfactory  
saturation of the user, independently of the manual  
actuation means that allow regulating the intensity of  
15 evaporation of the fragrant liquid itself. The device also  
includes the corresponding plug (10) placed in  
correspondence with the part near the bottom end of the  
base (1).
